September 2010

Welcome to the end of September edition of What's Emerging.

For those of you in Melbourne, Paul came in contact last week with an interesting concept being developed in Melbourne called the Hub.

It is part of a worldwide system under the same name. It is sort of a social enterprise incubator and it aims to create a space and a community where social innovation can take place by people interacting between all sorts of disciplines. Paul is facilitating a group from leadership Victoria that are acting as business mentors for the program in its attempt to gain investment from Social Traders in their [Crunch competition](#) which funds social enterprises. They are offering free associate memberships until the 15th October and also having open days on Thursday afternoons if you want to check it out.

You can see more details [here](#). If you are not in Melbourne then there are still opportunities to participate on line and there are likely to be connections in other major cities in Australia. If you are not in Australia they have a clickable map to the other hub sites around the world.

Cheers

Paul Higgins, Sandy Teagle, Kim Stewart, Anitha Mendonca, Syed Muqthar, and Samantha Kyle-Little

Business Tips

100 useful tips and tools to research the deep web

Experts say that typical search engines like Yahoo! and Google only pick up about 1% of the information available on the Internet. The rest of that information is considered to be hidden in the deep web, also referred to as the invisible web. So how can you find all the rest of this information? This list offers 100 tips and tools to help you get the most out of your Internet searches. [Read More...](#)

Lifehacker pack for Android: Their list of the best Android apps

Lots of people are picking up new Android phones these days—nearly 200,000 per day, at last count. Google's default apps are pretty handy, but the Market has many great apps, most of them free. Here's a look at LifeHacker's favourite free and cheap Android apps. [Read More...](#)

Use the Spike to copy and paste text in Word

There is a little known feature in word that allows you to gather groups of text and/or graphics from different locations in a Word document and then paste all of that text into another location. ***Paul Higgins: Found this very useful in compiling this newsletter because we gather all the links and tips in one place and then cut and paste the ones we want to use in the newsletter – this speeded up the process considerably.*** [Read More...](#)

Prey

Prey lets you keep track of your phone or laptop at all times, and will help you find it if it ever gets lost or stolen. It's lightweight, open source software, and free for anyone to use.

The best iPhone apps for getting things done

Whether you're in the office or on the go, the iPhone has become a pocketable workhorse for getting things done. Here are Lifehackers picks for the best iPhone apps to keep you working productively. [Read More...](#)

Brainstorming 'rules' can lead to real-world success in business settings

The study found that there are 21 specific best practices that contributed to successful brainstorming efforts, and that the benefits of high quality brainstorming could be attained when at least 10 to 11 of those practices are put into place -- such as the inclusion of subject-matter specialists and an openness to input from all team members. What's Emerging

Blood test accurately predicts death from prostate cancer up to 25 years in advance

A blood test at the age of 60 can accurately predict the risk that a man will die from prostate cancer within the next 25 years, according to researchers at Memorial Sloan-Kettering Cancer Center, in New York, and Lund University, in Sweden. [Read More...](#)

Swiss labs build credit card-sized projector for cellphones, operating rooms, and more

According to research director Maher Kayal, the device uses "tiny mirrors of less than a millimeter's thickness. Positioned on a silicon (wafer) disc, they reflect red, blue and green laser beams," to project VGA (640 x 480) images onto a surface equivalent to a 15-inch screen.

3-D printing spurs a manufacturing revolution

Businesses in the South Park district of San Francisco generally sell either Web technology or sandwiches and burritos. Bespoke Innovations plans to sell designer body parts. [Read More...](#)

MIT's self-assembling solar cells recycle themselves repeatedly, just like plant cells

A team of MIT scientists believe they've done it, creating a synthetic, self-assembling chloroplast that can be broken down and reassembled repeatedly, restoring solar cells that are damaged by the sun. [Read More...](#)

IDEO imagines the future of books

Design and innovation organisation is reimagining the book as an interactive, non-linear story telling experience. [Read More...](#)

Facebook co-founder is building a social network for non-profits

Hughes is launching Jumo later this year. Jumo is an attempt to foster more long-term and sustainable relationships between the people and organizations that are working to make a difference. [Read More...](#)

Alternative to X-rays makes its first step

A day when doctors need only visible light instead of X-rays to view a patient's innards can now be more easily imagined, with the announcement of a way to decipher the little light that passes through opaque materials. [Read More...](#)

Airbus engineers' plan for the future of flying

A special team of engineers from European aircraft manufacturer Airbus have drafted plans for the future of flight. These include a completely transparent fuselage that will allow passengers to see the stars above and city lights below. [Read More...](#)

Spray-on clothing

Fashion you can spray on hits the catwalk. The technology may also be useful for spray on bandages. The garment can be re-dissolved and the material used again. [Read More...](#)

How music videos are triggering a literacy boom

Nine years ago, India's national television network decided to introduce karaoke-style subtitles to these programs — not in a foreign language, but in Hindi, the language the stars were singing in. The first state to broadcast the subtitles was Gujarat. People in Khodi, and in the rest of the state, saw the captions as an opportunity to sing along with the songs. They began paying attention to the moving strip of lyrics at the bottom of the screen. Often, they would copy the words on paper, going back to them after the show was over. And as they did, the reading level in Khodi slowly improved. [Read More...](#)

World trade to grow 13.5% in 2010

World Trade Organization (W.T.O.) economists have revised their projection for world-trade growth in 2010 up to 13.5%, following faster than expected recovery in global trade flows so far in 2010. Its March forecast was a 10% expansion in trade volumes. [Read More...](#)

Groundwater depletion rate accelerating worldwide

In recent decades, the rate at which humans worldwide are pumping dry the vast underground stores of water that billions depend on has more than doubled, say scientists who have conducted an unusual, global assessment of groundwater use. [Read More...](#)

In Arabian Desert, a sustainable city rises

Designed by Foster & Partners, a firm known for feats of technological wizardry, the city, called Masdar, would be a perfect square, nearly a mile on each side, raised on a 23-foot-high base to capture desert breezes. [Read More...](#)

New App rewards shoppers for scanning barcodes

As a CheckPoint user, you can fire up the iPhone app at retail locations and grocery stores to check in and view advertised products. You can then scan product barcodes to accrue points, which can be instantly redeemed in the Rewards Store for gift cards, airline miles and gadgets. [Read More...](#)
